Ironlak®

→ Pump Action Paint Marker
1mm / 3mm / 7mm / 15mm

Pump Action Valve System Flow freely.

→ The unique Pump Action output system allows an adjustable paint flow across a variety of surfaces and application techniques. Press firmly for free-flowing colour applications, or dash lightly for metered strokes. Whatever your desired effect, the valve will accommodate by the amount of paint passing through to the nib to ensure clean and crisp line applications. Express yourself on any medium from porcelain to steel, terracotta to canvas – we've got you covered.

Water Based Acrylic Paint Colour with confidence.

→ The Ironlak Pump Action Paint Marker employs our specially designed water based acrylic paint, that utilises a smaller pigment particle size for optimum coverage. The addition of a high quality resin allows paint to flow smoothly – affording you the best possible coverage on your surface of choice. Whether filling colours with a broad marker, or adding minuscule details to a piece of illustration – the paint will cover clean. Ironlak Pump Action Paint Markers are also fully compatible with both Ironlak and Sugar Artists' Acrylic aerosol products, so you can create mixed media masterpieces with confidence.

Refills and Replacement Nibs Buy once, keep for a lifetime.

→ The Ironlak Pump Action Paint Markers are totally refillable, allowing you to replace the paint once it's depleted. Choose from Ironlak's Fluid Acrylic colour range, or mix and blend your own custom colour concoctions – the choice is yours. Our nibs are made from dense nylon fibres that retain paint and allow for a continuous flowing line. When they start showing signs of wear and tear, simply swap them out for a fresh set – it's as simple as that.

UV Resistant Serious staying power.

→ The paint in our markers is designed to withstand the elements – whether that means rain, hail, or shine. The pigments used are treated for UV stability, to ensure that your work will last under the rigours of the sun. Additionally, the resin compound used creates a paint film that further protects your work when exposed to inclement elements – adding a degree of elasticity that's crucial for application on surfaces that are prone to expand and contract. For maximum longevity and to protect your work we would still recommend applying a clear coat to create an additional barrier from the elements.

→ Knowledge is power.

Ironlak®

→ Pump Action Paint Marker
1mm / 3mm / 7mm / 15mm

Features: Water based acrylic paint. Pump Action valve system. Superior coverage. UV Resistant. Refillable. Replacement nibs available. Can be applied to most surfaces.

Four Sizes

1MM: The 1mm fine point nib is great for precise and detailed line work. It's a strong and durable nib made from nylon, and regulates the paint carefully to create the thinnest and sharpest lines possible.

3MM: The 3mm bullet point nib is great for precise and detailed line work, filling small surface areas and offers great versatility as an all purpose nib. Its dense fibres retain more paint, to produce a continuous paint flow.

7MM: The 7mm chisel nib is great for filling medium areas, calligraphy or crisp, bold line work. Use the angled edge to create detailed and intricate line work.

15MM: The broad 15mm nibs are great for filling large areas or crisp, bold line work. Its dense fibres retain more paint, to produce a continuous paint flow.
